

I'm Martim Lima.

I'm a Porto based Junior Software Developer. An aspiring archeologist turned programmer.

About Me

Once an aspiring archeologist who loved digging for archeological remains and now I'm trying to apply what I learned from archeology in my new found passion, Coding. I'm very calm and relaxed, I'm focused, and I can handle stress well. I'm also a very curious person, avid for knowledge. I find fundamental to try to better myself daily by continually learning new things. Learning Programming was a big personal challenge that is leading me to be a top tier Software Developer. The one you are looking for. So if you ever need someone to pick up that dusty code you have and dig the bugs out of it, you know who to call.

WORK

SPMS, EPE - Serviços Partilhados do Ministério da Saúde

Junior Software Developer • November 2020 - December 2020

Prescrição Electrónica Médica (PEM) | Electronic Medical Prescription • Fullstack Developer

PEM - Medical Electronic Prescription - is the computer application developed by Serviços Partilhados do Ministério da Saúde (SPMS) for Electronic Prescription of Medicines (MED),

Respiratory Care at Home (CRD), Medical Devices (DM) and Complementary Means of Diagnosis and Therapy (MCDT).

JavaScript, Java, JQuery, Hibernate, Weblogic Server, Ajax, HTML, CSS, JSP, Liferay, SQL / Oracle

Armis Group

Junior Software Developer • September 2019 - June 2020

Scatex Project • Backend Developer

This project is being developed for Efaced with the collaboration of their team for the purpose of developing an application that manage and maintain all the equipment that

Efaced develops and sells to their clients. This application also has the capability of generating several reports and aggregating the data collected from the equipment into forms for the client.

Java 8, Java Swint, XML, SVN

LeaveApp Project • FullStack Developer

This was an internal project with the objective of developing a webservice in which the employees of the company could book leave or sick days. This project had a couple key requirements. The login module of the project should log the user through Armis Active Directory, if the user was already log it should recognize the user and bypass the login and if the user hadn't logging yet it should present the Microsoft login page so the user could log in the internal network. The application should be capable of handling default approval flows, according to the internal structure of Armis and custom approval flows to account for fringe cases. This web service should also be integrated with the internal network of Armis.

Angular 6/7, Spring Framework, Spring Data, Spring Security, JPA, Typescript, Web API 2.0, SQL Server 2012, Oracle SQL, Postman, batch scripting, Azure AD, Hibernate, Maven, Tomcat, HTML, CSS, REST, Model View Controller Architecture (MVC)
